

## • Precast Wall Panel Molds

We needed a big picture to get it all in. The photo above shows a two section Wall Panel Mold ready for shipment to one of our customers in Virginia. The mold is 53 feet long and 10 feet wide. It is used to produce precast concrete wall sections for commercial and industrial building construction. The required number of walls are cast in a factory and transported to the construction site for quick installation.

## • Tank Assemblies

Many of the custom fabrications that we produce become part of a much more complex final product. Sheets of aluminum, carbon or stainless steel are carefully cut and formed into special shapes to hold diesel fuel, hydraulic oil or other liquids.

This diesel power unit, used for agricultural applications, comes equipped with a Cornell 140 US gal. fuel tank.

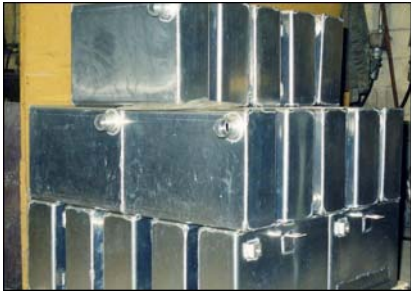

We also manufacture hydraulic oil reservoirs for a variety of different applications. Shown above is a 60 US gallon hydraulic oil tank mounted on the frame of a new utility truck prior to installation of the service body and rotating derrick.

The lower photo shows a massive 685 gallon hydraulic oil tank mounted on top of an electro-hydraulic power unit, that operates hoisting equipment on an off-shore oil recovery vessel. All of our many tank designs are custom engineered to meet each customer's specifications.

- **Tank Assemblies**

Cornell also manufactures a variety of products made from non-ferrous materials. Shown below is a shipment of 5 gallon aluminum tanks that are used for agricultural equipment.

Shown below, is a 700-liter marine fuel tank fabricated from stainless steel. We can also provide fresh water and waste water tanks for marine use.

- **Community Spirit**

At least twice a month, Cornell staff have been flipping burgers for an employee BBQ lunch. Proceeds from these events have so far raised over \$1000.00 for the United Way and local food banks. Congratulations to everyone involved!

- **Material Handling Equipment**

We have seen an increased demand from some markets for steel material handling baskets. These are often used for storage or transport of automotive parts. The pictures below show two different sizes of baskets ready for shipment to the customer.

- **Contact Us**

Good communication leads to more satisfied customers. If you would like any more information on any of the articles that appear in our newsletter, please let us know. We welcome your questions and comments by phone, fax or e-mail.
